RECYCLED TYPE 1 SUB-BASE

A recycled sub-base to specification
for Highway Works Clause 803

RECYCLED TYPE 1 SUB-BASE

Our aggregate recycling plants supply recycled Type 1 sub-base to Specification for Highway Works Clause 803 for highway or motorway sub-base surfacing.

Type 1 sub-base is recovered aggregate, asphalt and concrete which is crushed to provide a stable sub-base for highway or motorways. The mixture of solids and fines reduces and ensures minimal voids in the sub-base material when compacted, giving a strong load bearing layer with a suitably flat surface.

Typical use

Recycled Type 1 sub-base is used as a finished surface prior to a top coating of asphalt, concrete, shingle and block paving.

Recycling

We recover a large percentage of all highways arisings from our construction projects and recycle them at our unique static crushing, washing and grading plants.

Certified performance

Recycled Type 1 sub-base is certified to Specification for Highway Works Clause 803 for highway or motorway sub-base surfacing and is produced in accordance with the Quality Protocols published by WRAP.

For detailed guidance on material selection, laying requirements and appropriate uses, contact our Aggregates and Asphalt division.
