

SUREFARM

A resilient and durable surfacing
for agricultural environments

SUREFARM

SureFarm provides a resilient and durable surfacing that can withstand the astringent acidic wastes and pollutants found in agricultural environments.

SureFarm is a dense, resilient and durable surfacing with low voids that offers improved resistance to harsh chemicals and increased lifetime performance.

Features and benefits

SureFarm is a highly durable and low maintenance product.

Together with well-planned and built drainage it improves the lifetime performance in areas that need to be resilient to corrosive acidic wastes and pollutants. Silage liquor is one of the strongest pollutants that occur on farms and is highly corrosive.

The low void properties of *SureFarm* means that the surface is dense, which vastly improves the ability against these acidic wastes to permeate and corrode the surface.

Cost saving

SureFarm benefits over traditional concrete as it is faster to install.

Applications

- Livestock areas
- Silage areas
- Slurry bays

Guaranteed compliance

All mixtures comply fully with BS EN 13108 'Bituminous Mixtures' and the accompanying guidance notes (PD6691 Appendix B) as applicable.

Product testing complies fully with the requirements of BSEN12697 'Test Methods for Hot Mix Asphalt'.

Product installation and any subsequent testing is also compliant with BS 5944987 'Asphalt for Roads and Other Paved Areas'.

Certified performance

For detailed guidance on material selection, laying requirements and appropriate uses, contact our Aggregates and Asphalt division.
