

AGGREGATES AND ASPHALT DIVISION

# THE SUREFOAM<sup>®</sup> RANGE

A range of environmentally friendly asphalt products with a high recycled content

# THE SUREFOAM<sup>®</sup> RANGE

The SureFoam Range is suitable for a variety of applications from motorways and trunk roads to footpaths and car parks.

### SureFoam

SureFoam is an environmentally friendly asphalt with a high recycled content. As a cold mix product that uses foamed bitumen technology it can save money and be laid in a variety of applications.

SureFoam is a Cold Recycled Bound Material (CRBM) that is available as a base or binder course in 20mm and 32mm nominal sizes for structural use in highways, footpaths and other paved areas

### SureFoam Life

SureFoam Life is a non-structural storage grade version that can be held in your depot or at your construction project for up to five weeks if covered and stored on a suitable hard-standing. SureFoam is produced by a dedicated mixing plant at our Heathrow facility.

### Cost saving

As a cold-mix product, SureFoam uses less energy than traditional hot base and binder products. SureFoam's high recycled content of up to 95% reduces the industry's reliance on virgin materials. By engaging with Conway at an early stage, cost savings can be realised through correct design, efficient programming and effective transport planning.

### Sustainable solutions

SureFoam provides many environmental benefits. As a cold-mix material, SureFoam is energy efficient and has a lower carbon

footprint that conventional hot base and binder course products. It also produces fewer harmful emissions. As SureFoam Life does not require the addition of a cementitious binder, its carbon footprint is even lower. SureFoam is a solution built for the Circular Economy as it contains up to 95% recycled content and moves waste up the waste hierarchy.

### Guaranteed compliance

SureFoam complies with Specification for Highway Works Cl.948. Its recycled aggregate ingredients are recovered under a certified management system and subject to the same quality assurance system as virgin materials.

For detailed guidance on material selection, laying requirements and appropriate uses, contact our Aggregates and Asphalt division.
