SURELAYER[®]

A single layer surface application
for roads, road maintenance and
car parks

SURELAYER[®]

SureLayer is a single layer surface application to replace the traditional dual layer construction for roads, road maintenance and car parks.

SureLayer is designed to replace surface and regulating or binder courses in a single pass. This reduces overall costs, delivery times and minimises disruption for road users. This is especially valuable on critically time controlled sites in busy urban and residential areas.

SureLayer

SureLayer is a single layer application that improves compaction and increases durability due to its monobloc construction thereby improving long term performance.

SureLayer e

SureLayer e is a single layer high recycled content mix application, offering a reduced carbon solution while maintaining performance.

Single layer solution

SureLayer and **SureLayer e** is available up to a 20mm sized product that provides a compact finish from 70mm - 100mm thick.

Simplicity and speed

SureLayer and **SureLayer e** reduces the complexity of dual layer construction as well as the time taken to carry out project completion which means faster delivery and reduced operational disruptions.

Guaranteed compliance

All mixtures comply fully with BS EN 13108 'Bituminous Mixtures' and the accompanying guidance notes (PD6691 Appendix B) as applicable.

Product testing complies fully with the requirements of BSEN12697 'Test Methods for Hot Mix Asphalt'. Product installation and any subsequent testing is also compliant with BS 5944987 'Asphalt for Roads and Other Paved Areas'.

For detailed guidance on material selection, laying requirements and appropriate uses, contact our Aggregates and Asphalt division.
