

SURETEX

A surface course asphalt product
that reduces traffic noise

SURETEX

SureTex is a surface course asphalt made from specially prepared aggregate – reducing the noise generated by traffic movements while maintaining durability and skid resistance.

Minimising noise and disruption

As traffic levels increase, traffic noise is becoming an increasingly common issue in both urban and rural environments. The noise generated at the interface between vehicle tyres and the road surface can never be eliminated, but it can be reduced by creating voids in the road surface that contain the sound waves and reduce their transmission.

The cubical shape of the aggregate used in *SureTex* ensures the creation of uniform surface voids on the road surface. This significantly reduces the noise generated by passing traffic while still providing a durable and skid resistant surface – making it ideal for use in urban and high-density residential areas.

Guaranteed compliance

All mixtures comply fully with BS EN 13108 'Bituminous Mixtures' and the accompanying guidance notes (PD6691 Appendix B) as applicable.

Product testing complies fully with the requirements of BS EN 12697 'Test Methods for Hot Mix Asphalt'.

Product installation and any subsequent testing is also compliant with BS 5944987 'Asphalt for Roads and Other Paved Areas'.

For detailed guidance on material selection, laying requirements and appropriate uses, contact our Aggregates and Asphalt division.
